Inputs
Impact records, and the hazard, exposure and vulnerability sources that the review of published studies found to matter for storm impacts
1 Download
raw files with checksums
run1_download_datasets.py
2 Clean
used columns, types, signs and units
run2_clean_datasets.py
3 Link
aid, displacement, storm tracks, cascades
run3_link_records.py
4 Extract
Earth Engine measures, modelled surge
run4_extract_measures.py
5 Build
keys checked, CSV, SQLite, knowledge graph
run5_build_outputs.py
Public deposit (Zenodo)
Every table but EM-DAT's, the knowledge graph without EM-DAT, schema, data dictionary and checksum manifest. Users rebuild EM-DAT's values from their own export
